CHAIRS

A four-on-the-floor version of the versatile Tom chair. The 1-1/4 inch steel tube frame is finished in epoxy or chrome, with an available self-skinned black urethane armcap. Seats are of moulded foam with rigid urethane inner-shell and zippered slipcovers, or of lacquered birch veneer plywood.

The added stability of the four leg frame makes this chair particularly suited to health care and geriatric settings. Scaled-down versions provide secure seating for energetic use by children and youth.
